

Scientific mini-symposium

# Optimizing sustainable fishing on rebuilt fish stocks

Fish stocks in the North Atlantic are rebuilding and they compete for food and predate on each other. Ways of including fish interactions (density dependence) in the current single species approach to management are considered. The so-called Surplus Production Models will be a focus.

A group of scientists has evaluated the question, and will along with invited scientists, stakeholders and managers present and discuss the issue.

Scientists, managers, industry, and the public are welcome.

**Venue: Axeltorv 3, Copenhagen V, Denmark. 9:30-17:00, 23 November, 2022.**

Register: <https://MSE-symposium.eventbrite.com>

Organized by the "MSE-project": [www.mseproject.org](http://www.mseproject.org)
